

DANILO CADENA LIMA

Statistics & Computer Engineering Student | 1-Year Exchange at TU Dortmund (Germany)

Dortmund, Germany & Salvador, Brazil • Dancadlim@gmail.com • danilocadenalima.netlify.app • linkedin.com/in/daniilo-lima

EDUCATION

TU Dortmund (Technische Universität Dortmund) <i>Academic Exchange — Data Science & Statistics (1 Year)</i>	<i>Dortmund, Germany</i> 2026 – 2027
Taking undergraduate courses in data science, statistical computing, and German language.	
Federal University of Bahia (UFBA) <i>B.Sc. in Statistics (Bacharelado em Estatística) — 3rd of 4 Years</i>	<i>Salvador, Brazil</i> Expected 2027
Coursework: Probability theory, statistical inference, hypothesis testing, regression analysis, sampling, and data modeling.	
Center of Integrated Manufacturing and Technology (SENAI CIMATEC) <i>B.Sc. in Computer Engineering (Engenharia de Computação) — 3rd of 5 Years</i>	<i>Salvador, Brazil</i> Expected 2028
Coursework: Algorithms, data structures, software development, and object-oriented programming. Member of CIMATEC Startups.	

PROJECTS & EXPERIENCE

Automated Statistical Analysis with Python & R	<i>Python, R, Pandas, SciPy</i>
- Wrote Python and R scripts to automate exploratory data analysis, run hypothesis tests, and fit probability distributions to empirical data. - Built automated routines that calculate summary statistics, confidence intervals, and generate data visualizations to speed up analysis.	
Address Validation & Standardization Pipeline — Equifax & UFBA	<i>UFBA, Salvador</i> 2024
<i>Academic-Corporate Practical Project • Python, Pandas, Regular Expressions</i> - Engineered a data cleaning and validation pipeline to parse, standardize, and verify Brazilian address datasets for Equifax. - Resolved postal formatting discrepancies and anomalies to ensure clean data feeds for credit-decisioning workflows. - Delivered a formal technical presentation on pipeline architecture and data quality metrics to an evaluation panel at UFBA.	
Educational Material Generator with LaTeX Validation (PIBIC)	<i>UFBA Research Project</i> 2025 – 2026
<i>Python, Google Gemini API, LaTeX Verification, Pydantic</i> - Created a program that organizes and generates study materials and exercises for university math and probability courses using the Gemini API. - Built a Python validator that checks and cleans mathematical LaTeX equations, ensuring formulas compile correctly without formatting errors.	
Review & Evaluation Tool with CrewAI	<i>Personal Project</i> 2025
<i>CrewAI, Python, Streamlit</i> Built an application using CrewAI where different AI roles evaluate text proposals from multiple angles (structure, logic, and clarity) and combine their notes into a single report.	
MyPersonalTeam — Web Application (CIMATEC Startups)	<i>CIMATEC Startups</i> 2026
<i>React, JavaScript, Tailwind CSS, Google Gemini API</i> Developed an interactive web app in React to create and chat with customized AI personas, participating in the CIMATEC Startups program.	

SKILLS & LANGUAGES

Statistics: Probability theory, statistical inference, hypothesis testing, regression analysis, exploratory data analysis.
Programming & Data: Python (NumPy, Pandas, SciPy), R, SQL, C++, Java, Git, LaTeX, Jupyter Notebooks.
Tools & Frameworks: Streamlit, React, CrewAI, Google Gemini API.
Languages: English (Advanced / CEFR C1 — TOEFL iBT Score 93), Portuguese (Native), Spanish (Intermediate — B1/B2), German (Basic — A1/A2, living in Germany).

ACADEMIC COMPETITIONS & AWARDS

National Science Olympiad (ONC 2023): Gold Medal (multidisciplinary physics, chemistry, biology). Brazilian Olympiad of Geography (OBG 2023): Gold Medal (geospatial data analysis & demographics). Brazilian Astronomy Olympiad (OBA 2023): Bronze Medal (astrophysics and calculations). Kangaroo Math Competition (2021): Honorable Mention (logic and mathematics). NASA / IASC Asteroid Search Campaign (2023): Astronomical image analysis and candidate asteroid tracking.
